

# IntegrationPilot smart 2.0

## Faster in color

Make ready times of the printing press can be reduced significantly by job preparation including ink presetting. Thus, the investment in IntegrationPilot Smart 2.0 is returned after a few months. IntegrationPilot Smart creates the print job, including colour presetting from the CIP3 File (Print Production Format)

Easy to use and with quick results, IntegrationPilot Smart 2.0 is characterised by a very simple operation and provides the following functionality:

- Fast job creation, including colour presetting.
- Scheduling and optimisation of the sequence of print jobs.
- Copy function to acquire press settings from previously printed jobs.
- Preview Image
- Printout of a Pallet label

## Benefits at a glance:

1. Reduction of the make-ready times by up to 25% by colour presetting and up to 25% less waste.
2. Short training time.
3. Savings of working time with job preparation between 2-5 minutes per job.
4. Upgrade possibility to other Integration Pilot functionalities

Joblist.
