Uninterrupted data collection

Non-utilised machine time and problems cost money and need to be systematically reduced, but “only what can be measured objectively, can be improved upon. Therefore, machine and operating data acquisition becomes the focus of attention.

How can machine performance be easily, automatically and reliably measured and evaluated by pressing one button? “

IntegrationPilot Plus supplements IntegrationPilot by adding automated and detailed data collection that can be used for analytical purposes.

What has been printed and when? Why was there downtime? Which fabrication times go into the costing? IntegrationPilot Plus provides all the answers.

- Precise and complete time tracking of production time, supplies, and downtime.
- Precise and complete material collection of good sheet and waste sheet counts.
- Graphical view of the production curve.
- Printout of electronic timesheets.
- Productivity report of printed jobs.

Benefits at a glance:

1. Automatic data acquisition combined with manual input for down-times of the printing machine.
2. Manual entries are only required in case of failure.
3. Downtimes are recorded automatically and can be commented upon at any time.
4. Secure data collection.
5. Data output to external systems in JDF, JMF format.
6. ODBC / JDBC data export.
7. Electronic Timesheet of the pressman as PDF and CSV file.
